

# TANKO STEPHEN SULE

## MEDICAL LABORATOR SCIENTIST

**Date of Birth:** 01:10:1992

**Nationality:** Nigeria

**State of Origin:** Nasarawa

**Contact Address:** No 17B Ali Akilu Street Barnawa, Kaduna.

**Mobile:** +2347038288107, +2348162637653

**Email:** [tankostephensule@gmail.com](mailto:tankostephensule@gmail.com)

## PROFILE SUMMARY

Hardworking Medical Laboratory Scientist with 4 years experience and having practical knowledge and hands-on experience in carrying out routine and special medical laboratory tests and diagnoses. Adept at program planning, community mobilization, data collection, laboratory analysis, equipment handling, automated testing, reagent preparation, quality control, laboratory documentation, and safety protocols. Possess sound interpersonal skills, and ability to work across multiple laboratory departments. Proficient in written and verbal communication with ability to speak English, Hausa and Mada.

## PROFESSIONAL EXPERIENCE

**Medical Laboratory Scientist | St. Gerrard's Catholic Hospital Kakuri** |11/22- present

Acting as the Medical laboratory scientist in charge of overseeing and running investigations in the Medical Microbiology laboratory, I had the opportunity to work with Kagoro free medical outreach, who rendered both medical and nutritional interventions to beneficiaries of the community, I also ensured that samples are correctly collected, labelled and analyzed, while giving out results within a short time to serve patients in an improved manner. The duties I carry out include;

- Punctual resumption of work to perform all daily functions with utmost professionalism and dedication to contribute to the successful execution of the team's goal
- Educated and instructed patients on standard urine, sputum, semen and fecal sample collection procedures to avoid contamination of samples
- Performed phlebotomy and process blood samples to get serum and plasma units for different blood tests.
- Carried out special investigations on nucleic acid extraction, polymerase chain reaction (RT-PCR), blood biochemistry and also conducted manual and automated laboratory tests in biochemistry, hematology, microbiology, immunology, coagulation and bloodbanking.

- Carried out routine laboratory documentation, quality control log check, result dispatch, and other entries
- Ensured that my duties are carried out with utmost professionalism for my client's satisfaction, ensuring a short turn around time bearing in mind that the clinical relies on my competence to accurately diagnose the patient
- Took part in training laboratory staff and team in HIV testing and protocol exercise, including SOP's and safety measures to ensure that all staff can efficiently carry out HIV testing perfectly
- Worked in conjunction with Centre for Integrated Health Programs, CIHP an NGO who care for HIV/AIDS patients
- Collected samples for viral load and CD4 count while observing all guidelines for personal protection during sample collection, and also collected samples from infants for DBS investigations and stored it for the CIHP organization to pick up to their testing center
- Followed safety protocols to minimize risk while handling infectious materials and biohazardous substances through the use of biosafety cabinets
- Prepared Gene-expert samples for pickups, courier deliveries, and shipments, ensuring proper packaging and compliance with sample transportation regulations
- Monitored laboratory stock levels to ensure availability and restocking of consumables at all times and I ensured that the testing kit provided for the test by the organization is strictly used for that purpose only
- Before giving a positive result, I ensured that all confirmatory test is done and a witness in the laboratory must attest to the final result before it is issued out to the patient
- Every positive case was reported only to the ART Center and such results were of utmost confidentiality
- Prepared a technical and clear record of all patient's details and result electronically and on paper for easy reference when needed.
- Carried out quality control and quality assurance on testing kits and laboratory machines routinely to ensure precision and accuracy
- Gave support for the optimization of ART service delivery at the various LGAs through phone calls to track ART patients in the various LGAs of service delivery at supported facilities to minimize missed opportunities and ensure medication compliance
- Provided technical assistance by visiting nearby supported facilities across the project jurisdiction, providing training, mentorship, and supervision to concerned health workers on HIV/PMTCT/ART/RH activities, thereby building their capacity for quality care delivery in the areas of concern
- Routinely monitor and record the temperature of the laboratory space, fridges and freezers, documenting any alarms triggered by the temperature monitoring system promptly, while also carrying out routine laboratory documentation, quality control log check, result dispatch, and other entries

- Participated in routine equipment maintenance, machine calibration, troubleshooting technical issues, following standard operating procedures, and trainings
- Collaborated effectively with a multidisciplinary team of scientists, researchers, and medical professionals to gain more insight and knowledge when faced with a difficult situation
- Always available for after work activities which may center on the day's routine laboratory analysis, or some oversight
- Took part in additional duties as assigned to meet the specific needs of the laboratory team

### **Medical Laboratory Scientist|8 Base Ammunition Depot Medical Reception Station Zamfara 09/21 – 10/22**

Acted as the Medical laboratory scientist running the laboratory of the facility, and maintaining utmost professionalism while adhering to strict procedures and policy relating to high levels of performance.

- Planned and carried out medical outreach where I collected data from rural dwellers, and prepared a comprehensive report from the analysis carried out using the data collected.
- Carried out interactive sessions with community dwellers, was engaged in positive communication and eventually won their trust to provide me with data about themselves for carrying out the medical part of the outreach.
- Provided necessary documents and information to the leading supervisor informing him of the progress of all operations within and outside the hospital.
- Collected samples from TB and HIV patients following the guide lines for infectious sample collection, and carried out the required investigation on the samples.
- Collected appropriate body fluids to carry out investigations ranging from immunology, hematology, microbiology, and clinical chemistry analysis for an exercise called Free from Infection.
- Practiced patient's confidentiality, keeping patient's identity, details and results confidential
- Carried out quality control and quality assurance measures on all testing kits and procedures to ensure competency and accuracy following ISO standards
- Maintained, calibrated and cleaned the laboratory machines, and notified the hospital of any pending servicing of laboratory machines on time.
- Took inventory of incoming consumables to the lab, and recorded all results generated from laboratory investigations.

### **Intern Medical Laboratory Science |Federal Medical Center Nguru Yobe State 07/20 - 06/21**

A Medical Laboratory Science Intern, saddled with the responsibility of sample collection from all patients including tuberculosis patients while using personal protective equipment.

- Sorted, labeled, and prepared specimens for analysis while assisting the Laboratory Manager.
- Carried out both basic and advanced medical laboratory diagnoses across chemical pathology, microbiology, histopathology, hematology and blood banking laboratory departments in the facility.
- Administered Mantoux Tuberculin to patients
- Gained experience in Tuberculosis diagnosis including GeneXpert testing, culture and AFB microscopy at the **National Tuberculosis and Leprosy Control Programme (NTBLCP)** and the **State Tuberculosis and Leprosy Control Programme (STBLCP)** FMC Nguru Yobe
- Consulted and worked with other medical laboratory scientist to gain more experience and knowledge in Gene expert lab
- Carried out a daily maintenance of laboratory equipment to ensure a proper working condition

## SKILLS AND COMPETENCIES

|                     |                        |                       |
|---------------------|------------------------|-----------------------|
| Hematology analysis | Body Fluid Analysis    | LIMS And MS Suite     |
| Blood Banking       | Transparency           | Integrity             |
| CD4 count           | Compatibility Testing  | Equipment Calibration |
| Phlebotomy          | MS Suite               | Organizational skills |
| Immunoassay         | Information Management | Multitasking          |
| Time management     | Accountability         | Problem solving       |

## EDUCATION

BMLS, Medical Laboratory Science | University of Jos  
|June 2019|

## PROFESSIONAL MEMBERSHIP AND LICENCE

Member | Association of Medical Laboratory Scientists in Nigeria (AMLSCN)

## CERTIFICATIONS AND TRAININGS

Member | Data collector, NCDC-NYSC COVID TEAM at NYSC Orientation camp Tsafe Zamfara |**February 2022-August 2022**  
HIV Recency Rapid Testing Training |CIHP Kaduna |**December 2022**|

## INTERESTS

Medical research |Traveling |Biomedical science | Astronomy |Reading | Learning people's culture
